aws

Amazon EC2 WINDOWS SERVER

DOCUMENTATION

A Complete Guide to Launch, Configure, Connect, and Manage Windows Server Instances on Amazon EC2

LAUNCH
Quickly deploy Windows Server instances

SECURE
Configure security groups and access controls

CONNECT
Connect using RDP and manage your Windows Server

MONITOR
Monitor performance and set up alerts with CloudWatch

MANAGE
Perform system administration and maintenance tasks

SECURE. SCALABLE. RELIABLE.
BUILT FOR THE CLOUD.

AWS EC2 WINDOWS SERVER PROJECT

BY DARSHAN PATIL

➢ INTRODUCTION

What is Amazon EC2? 💡

Amazon EC2 (Elastic Compute Cloud) is an AWS cloud service that allows users to create and manage virtual servers called instances. It provides scalable, secure, and on-demand computing resources without the need for physical hardware. EC2 supports multiple operating systems, including Windows and Linux, and follows a **pay-as-you-go** principal model.

What is Windows Server on EC2? 🌐

Windows Server on Amazon EC2 is a Windows-based virtual machine hosted on AWS. It allows users to run Windows applications, host websites, and manage enterprise workloads without maintaining physical servers.

REQUIREMENT 🔑

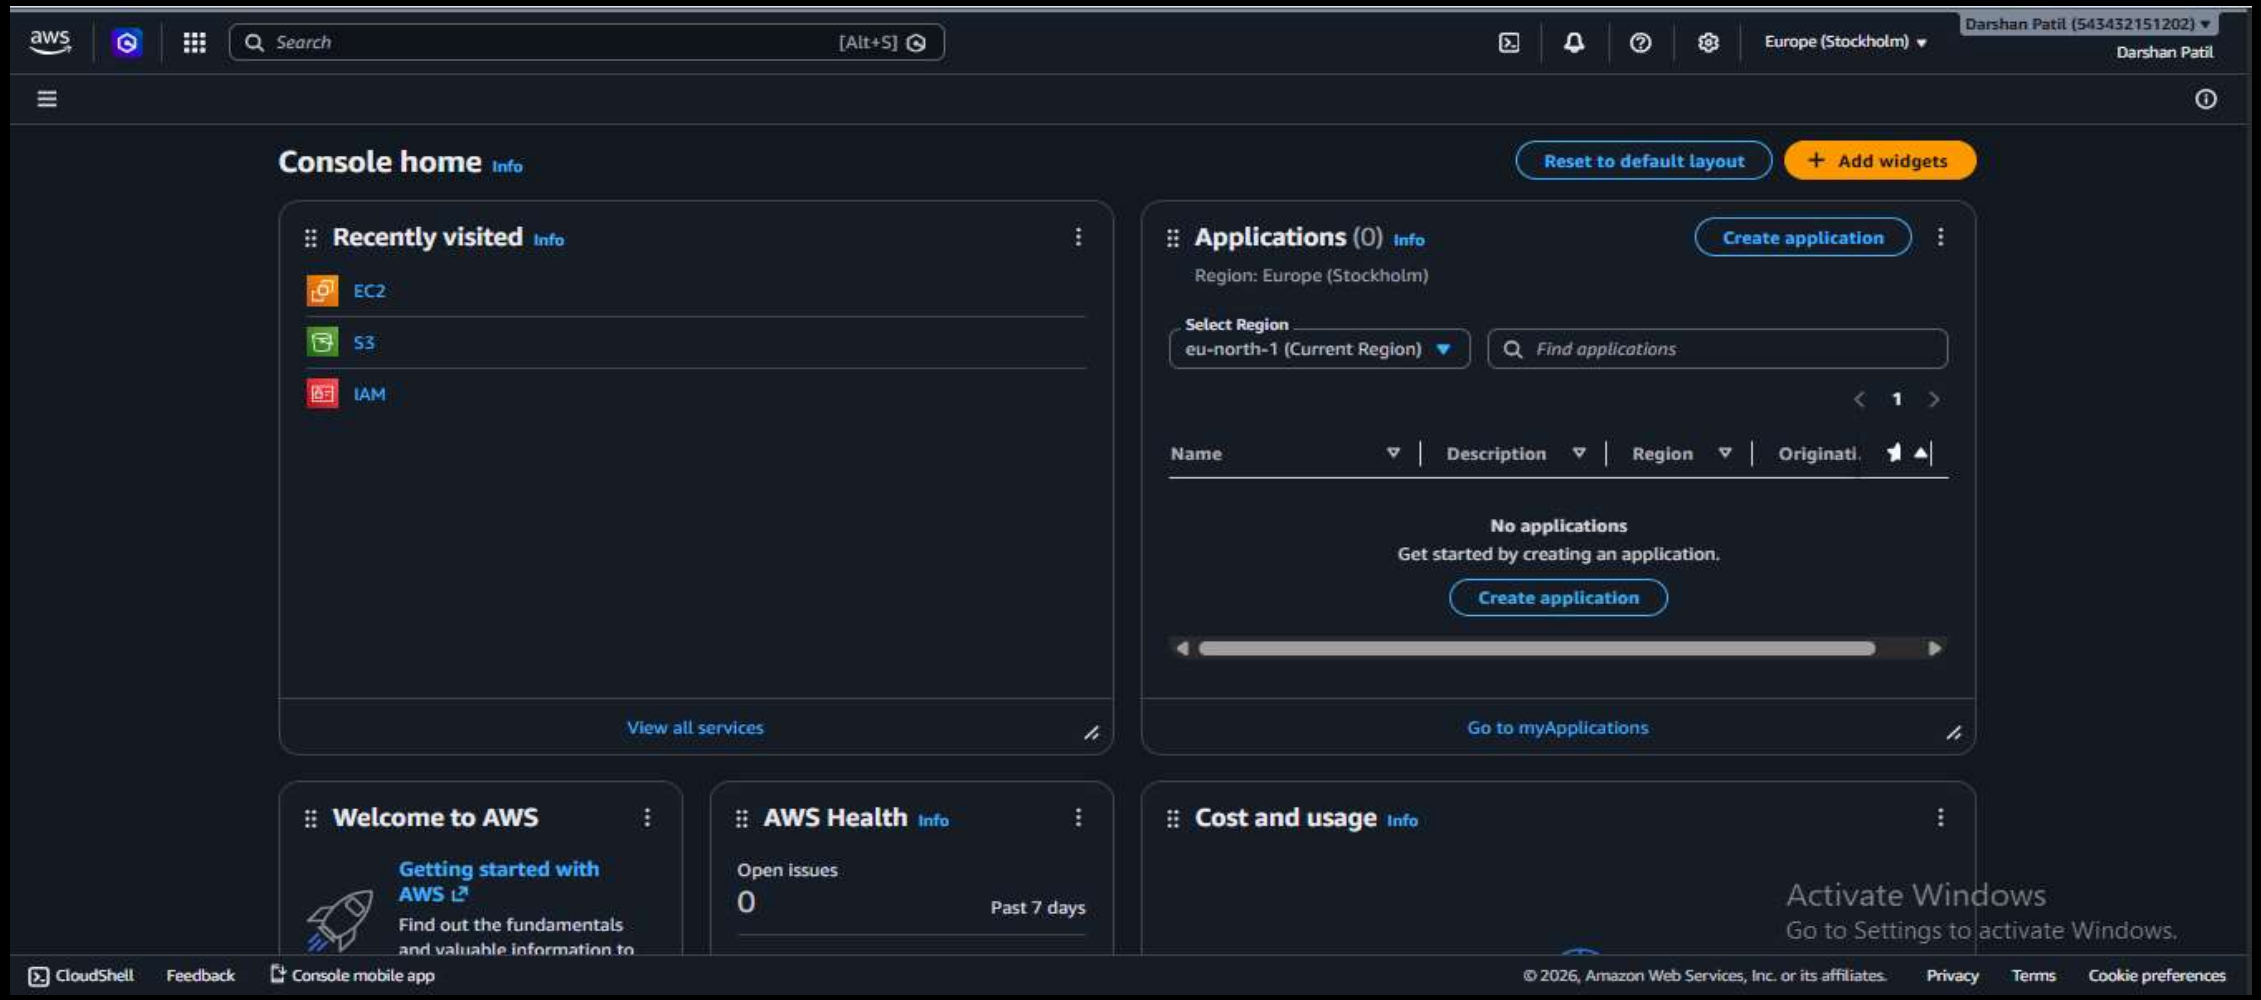

- AWS Account
- IAM User with EC2 permissions
- Key Pair (optional for password retrieval)
- Security Group
- VPC and Subnet

✅ BENEFITS OF WINDOWS SERVER ON AMAZON EC2

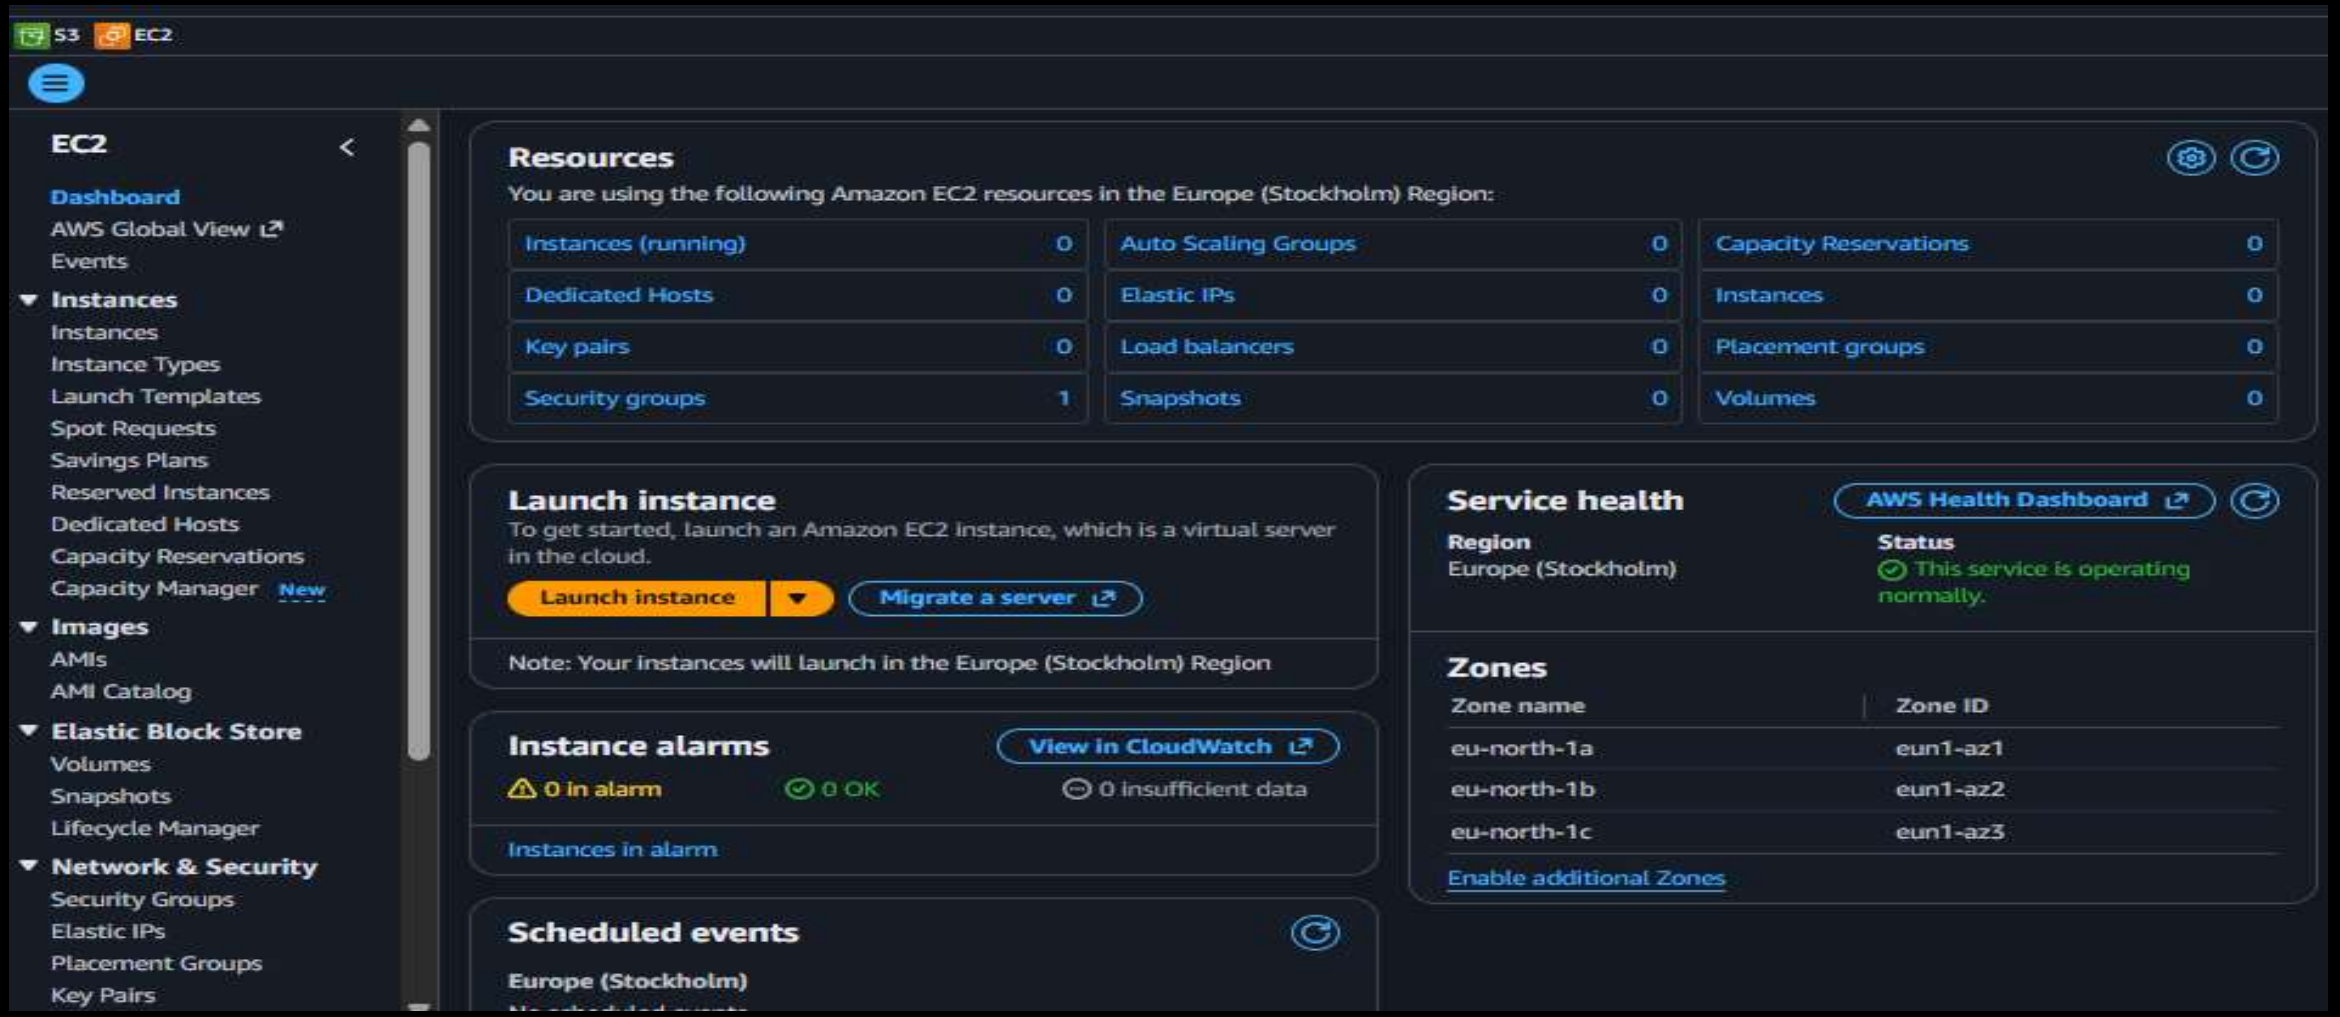

- **Fast Deployment** – Launch a Windows Server instance in just a few minutes.
- **Pay-as-You-Go** – Pay only for the resources you use, reducing infrastructure costs.
- **Easy Scalability** – Increase or decrease CPU, memory, and storage as needed.
- **Enhanced Security** – Secure your instance with AWS Security Groups, IAM, and encryption.
- **Remote Access** – Connect and manage the server from anywhere using **RDP (Remote Desktop Protocol)**.

- **LAUNCH YOUR EC2 INSTANCE ON AWS :**

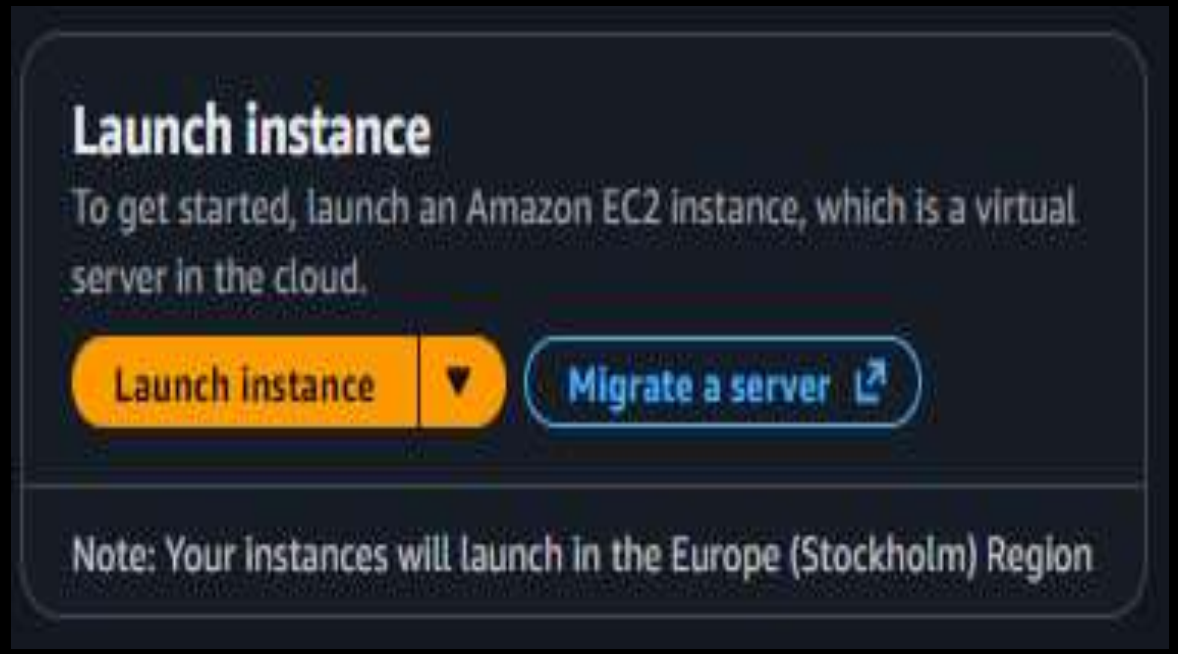

1. Log in to your **AWS Management Console.** It's time to get started.

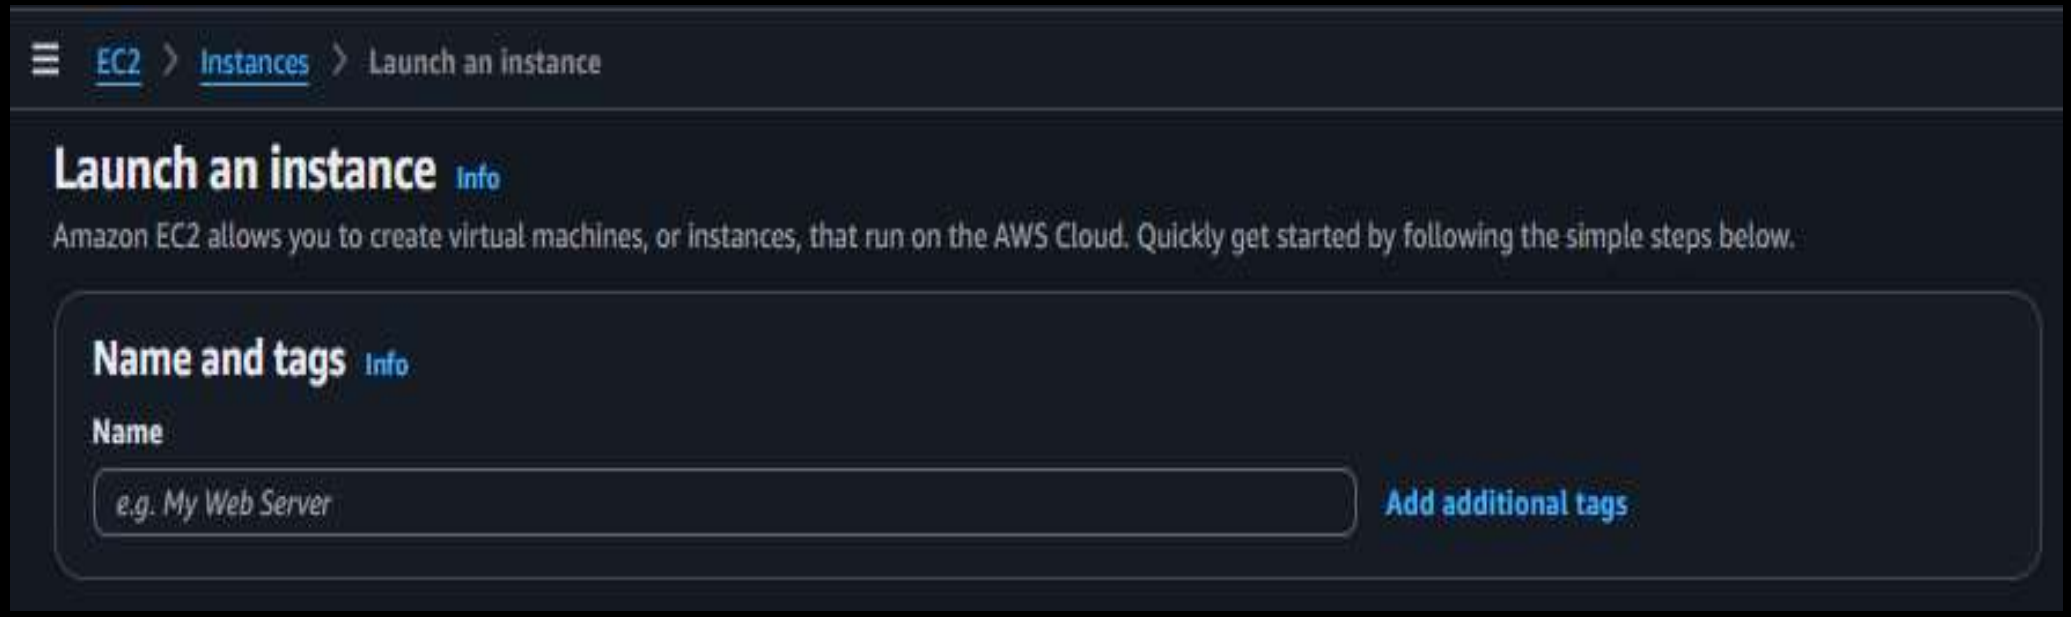

2. Head over to **EC2 Dashboard under Services**, the heart of your cloud adventure

3. Click the **Launch Instance** button and get ready to takeoff 🛫

4. Give a name to your instance , this helps you easily identify it later.💡
(Eg–window-01)

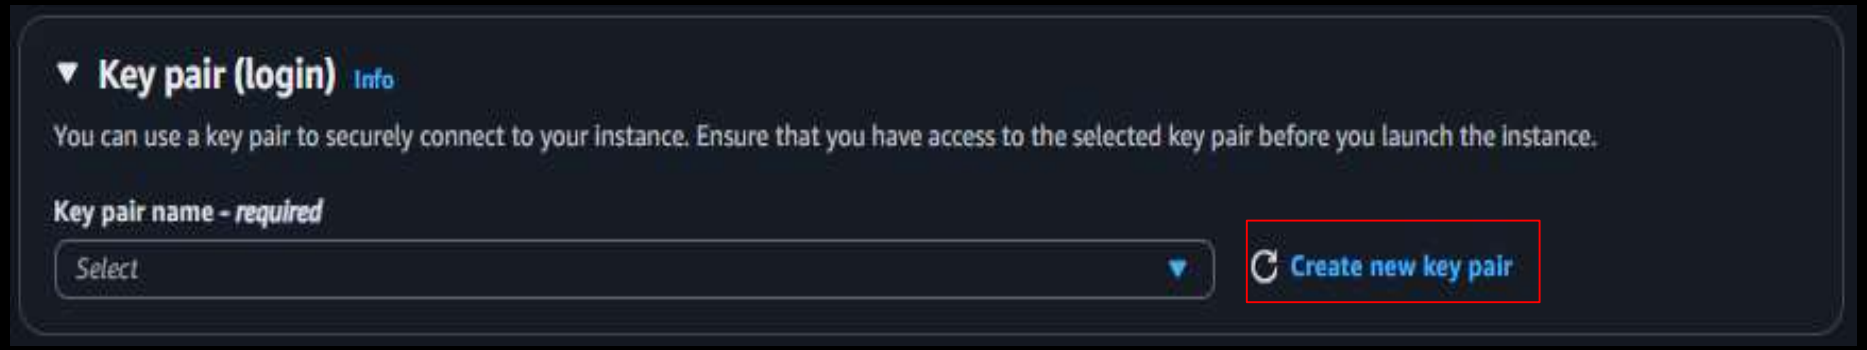

5. Pick your **Amazon Machine Image (AMI)** (**Windows**)

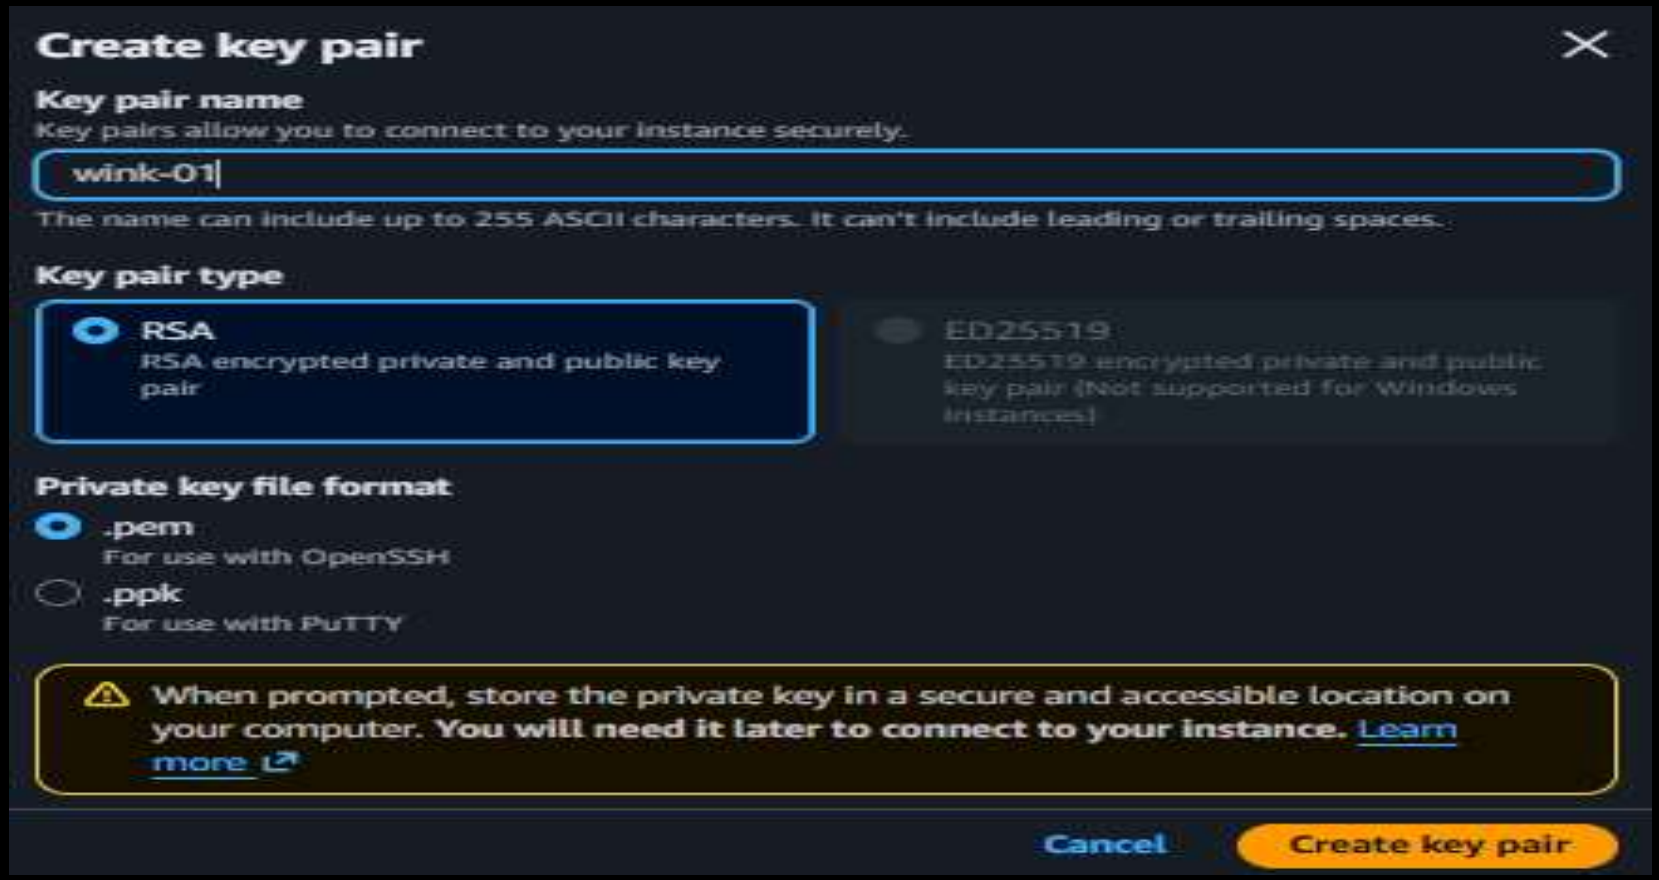

6. **Choose an Instance Type** : Select **t2.micro ,** which is perfect for beginner and falls within free tier offering 🎁.

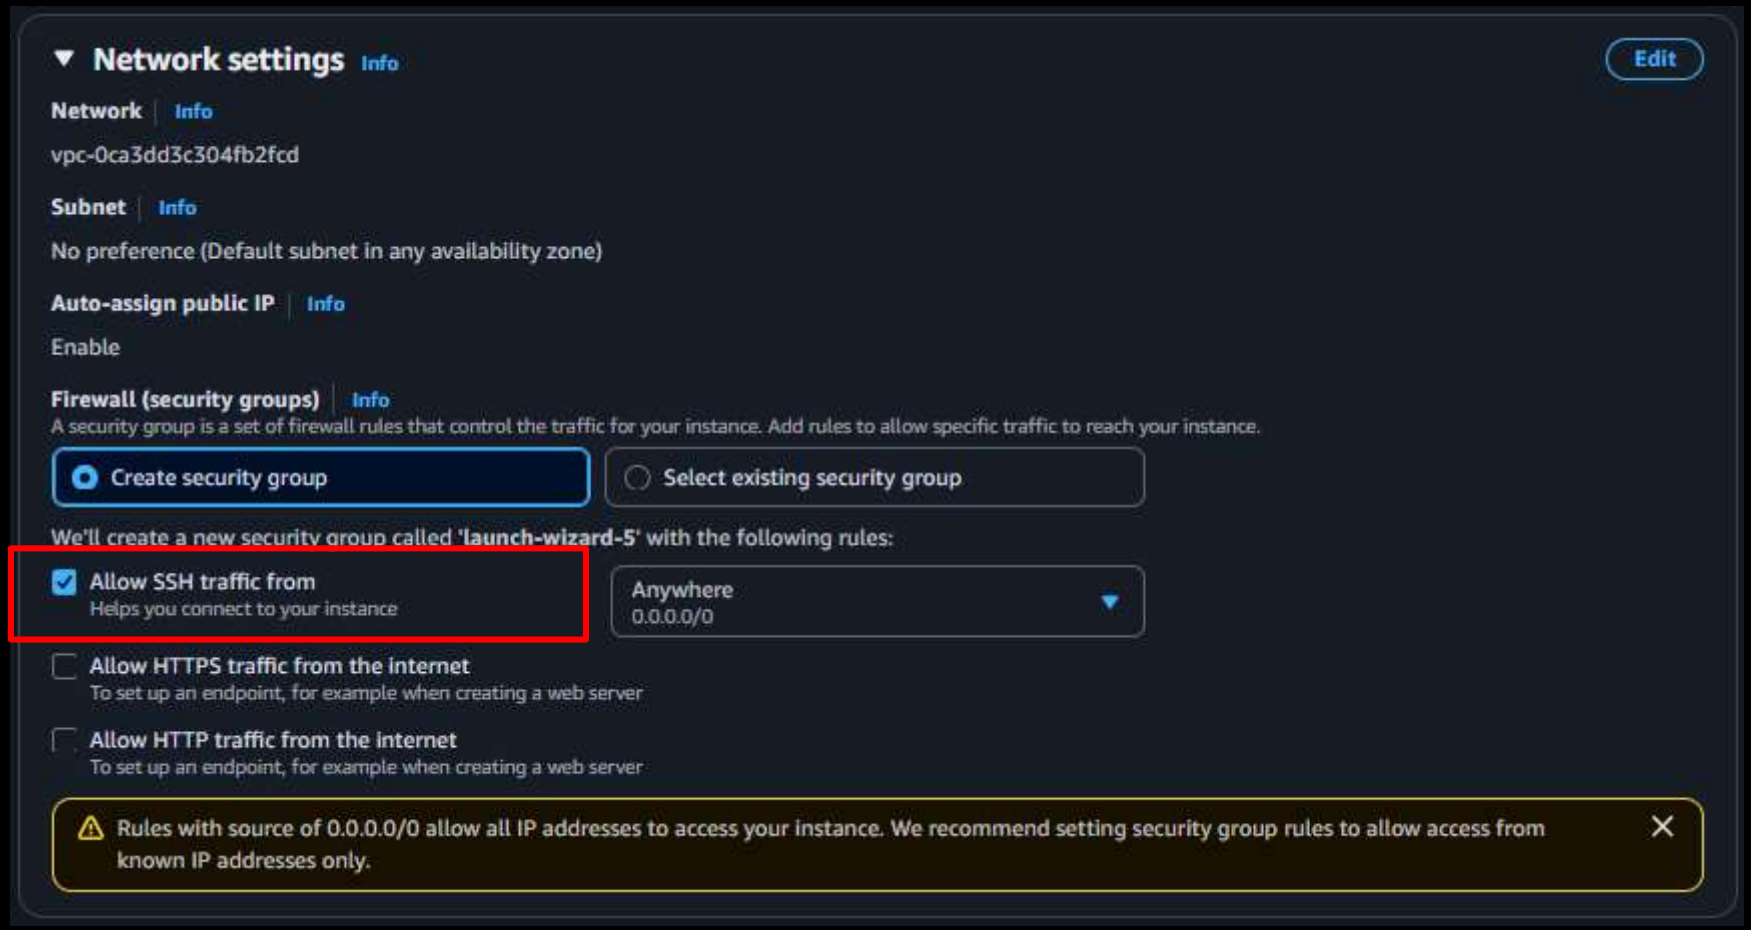

7. In the **Key Pair** section, click on **Create a new pair** to generate a new key pair for secure access 🔑

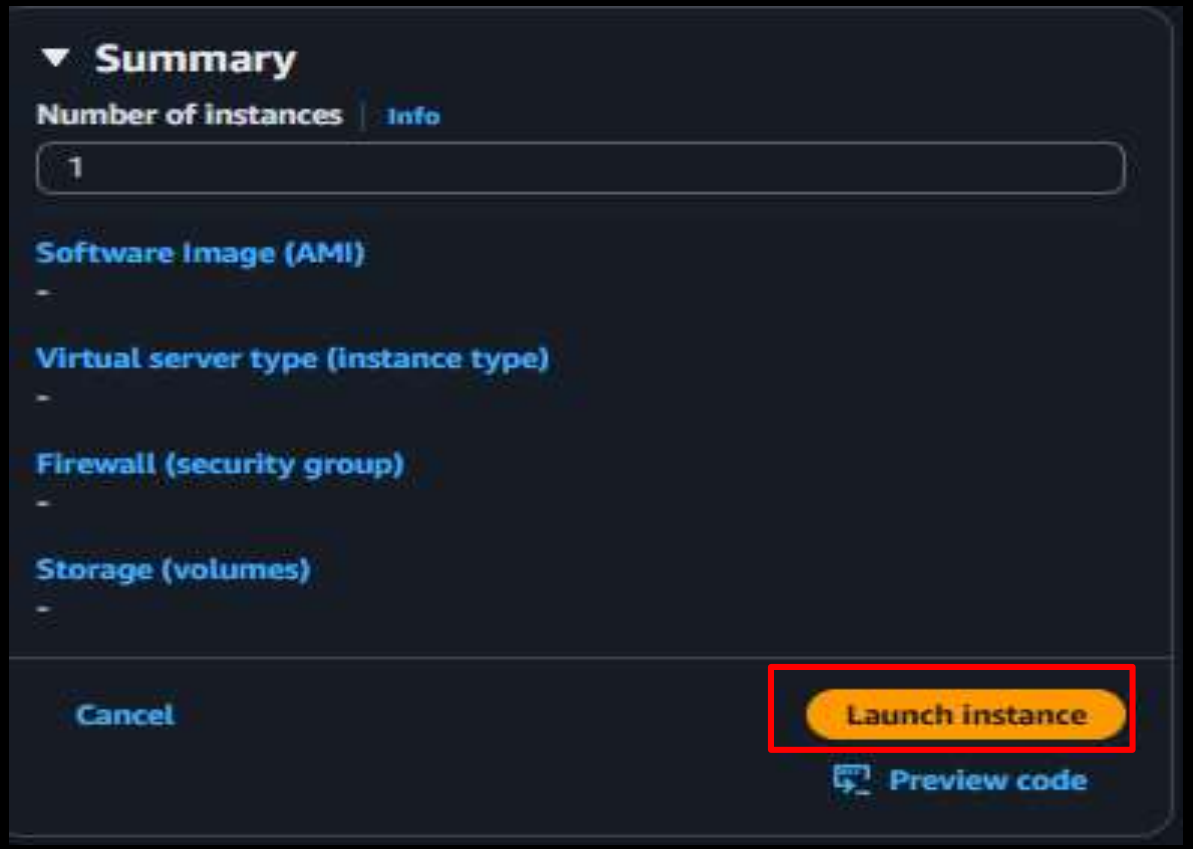

8. Give your key pair a name (e.g.. **Wink-01**) 📒

9. Configure your **Security Group** , just make sure **SSH** (port 22) is allowed 🔐.

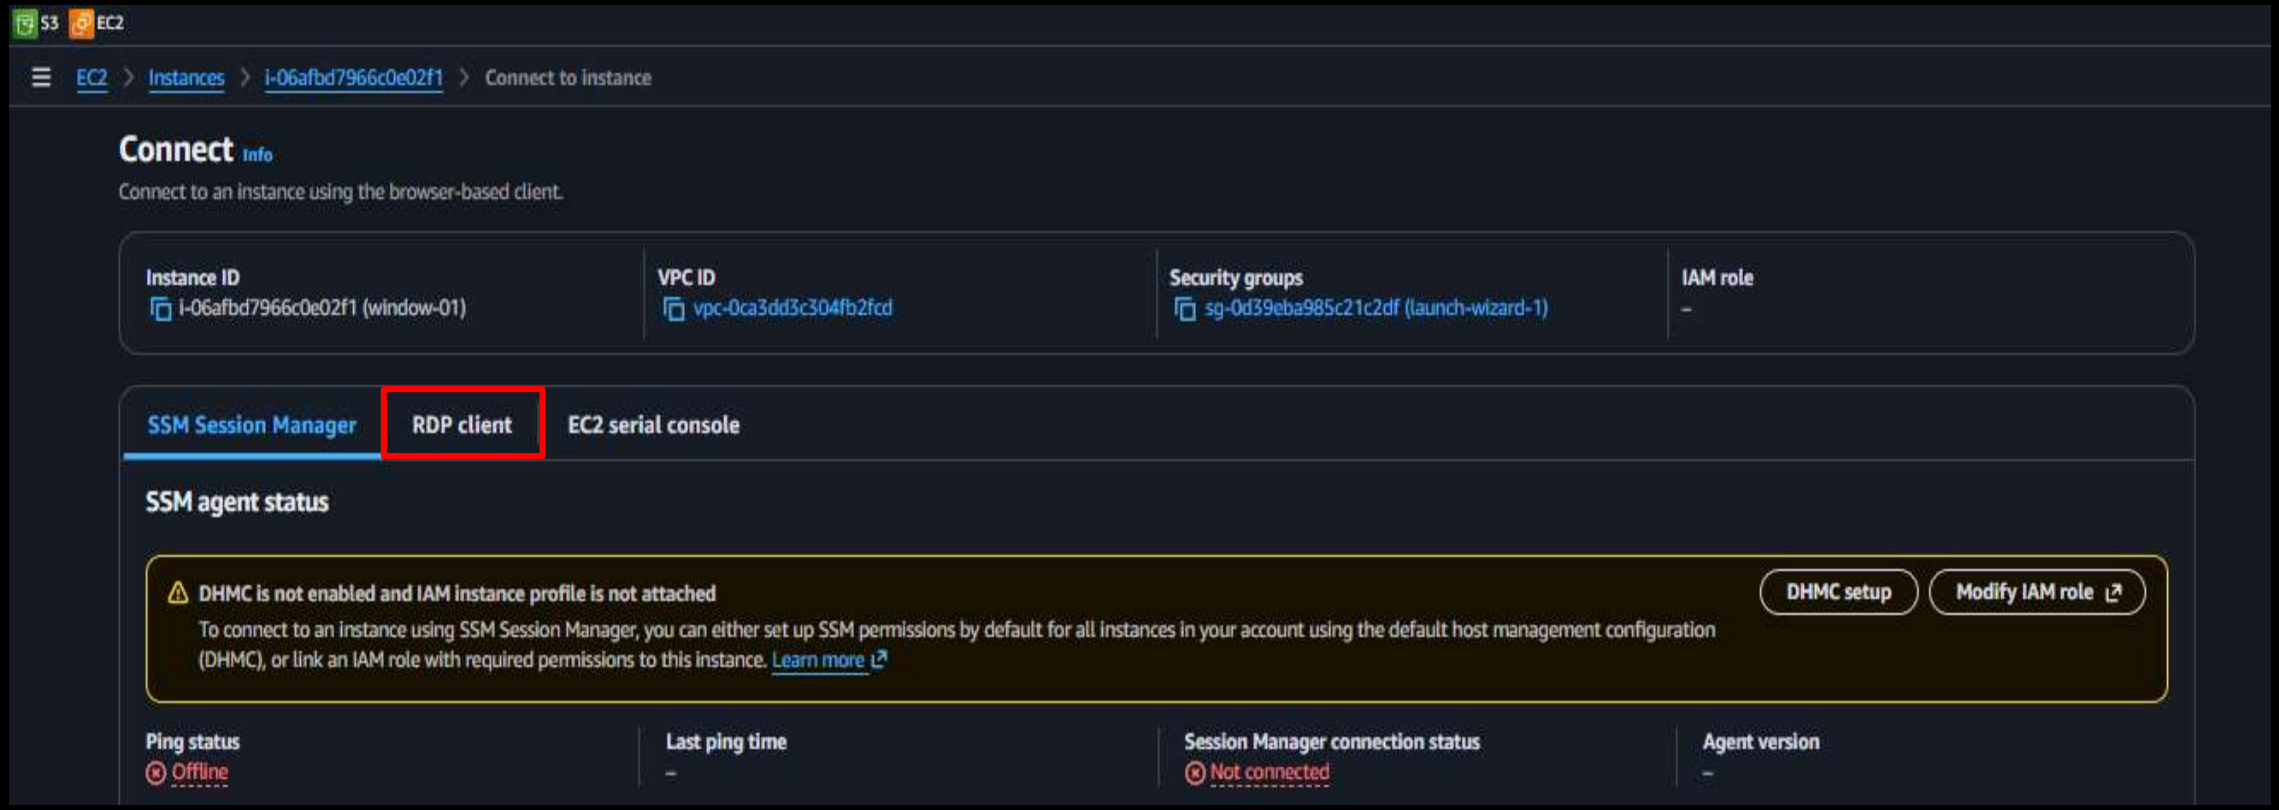

10. See the instance **Summary** and click on **Launch Instance**

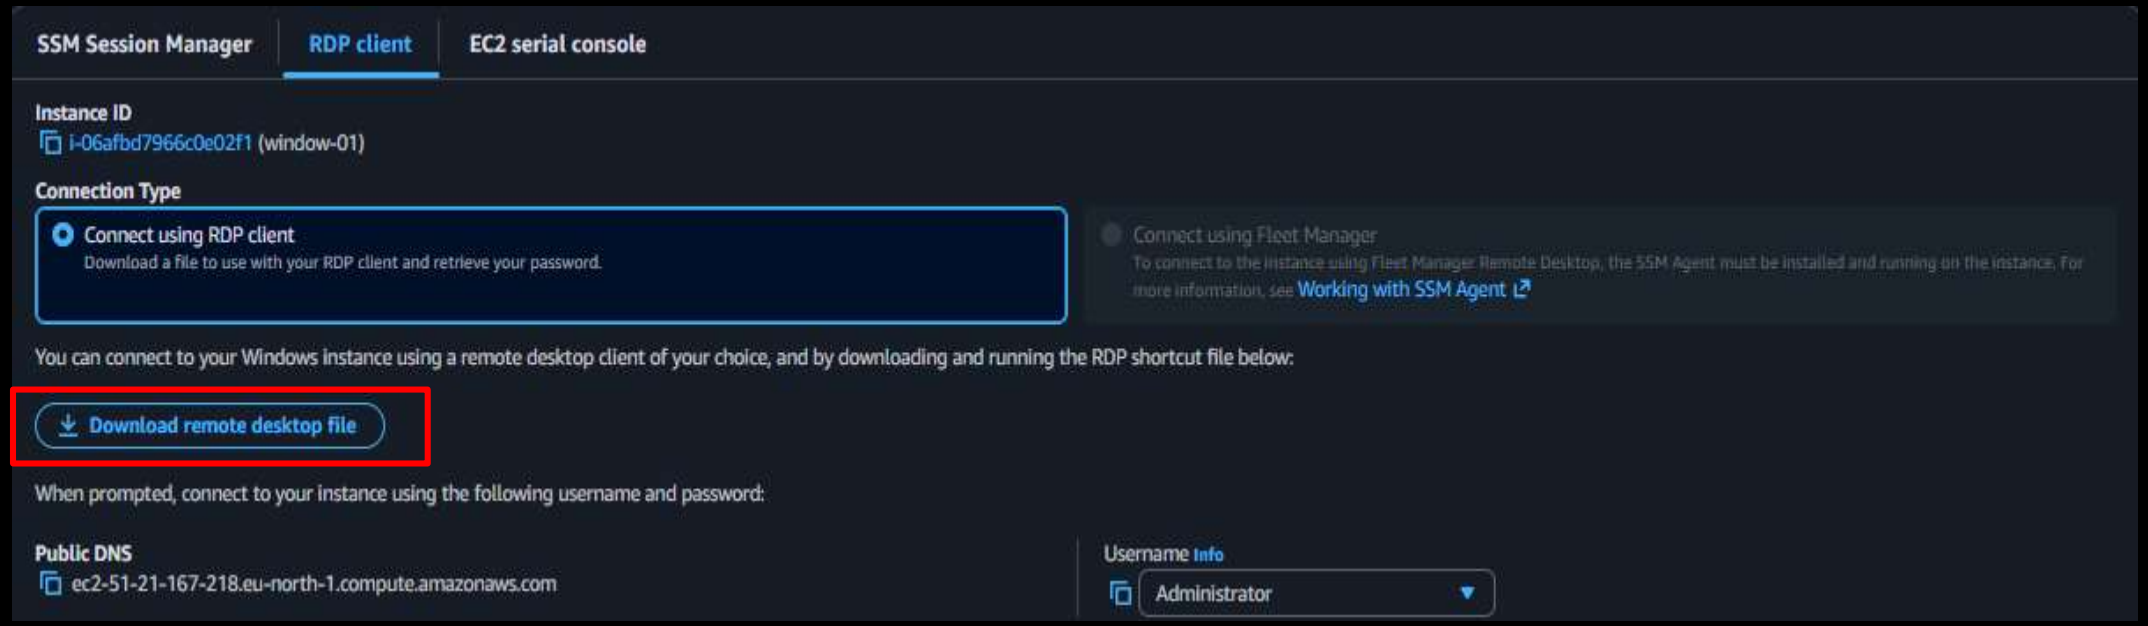

11. Connect the **Instance**

12. Go to the **RDP Client (Remote Desktop Protocol)**

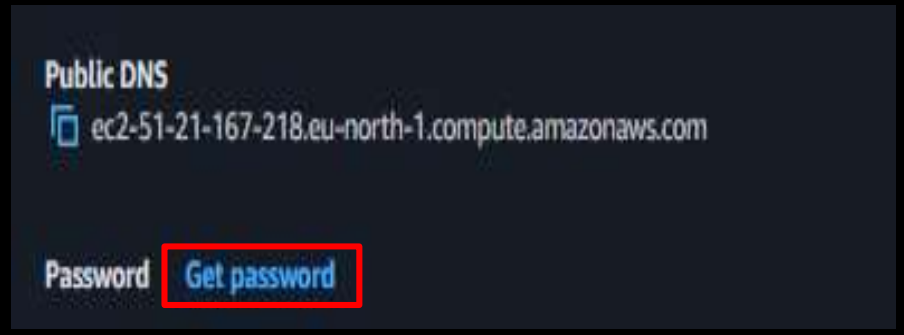

13. Download Remote Desktop File 📂

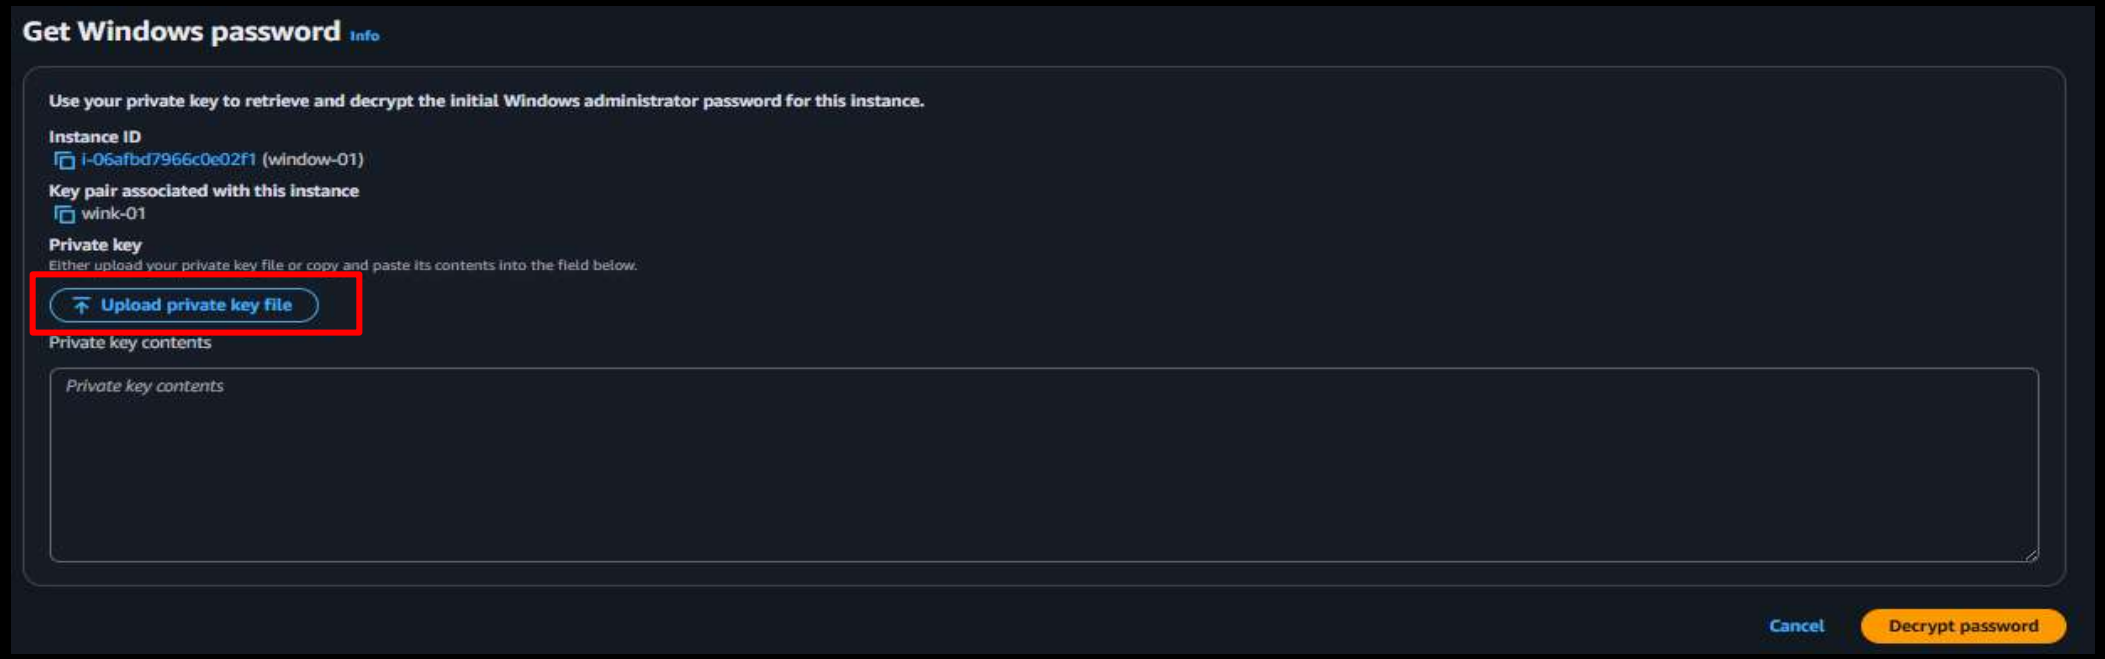

Downloaded Desktop File →

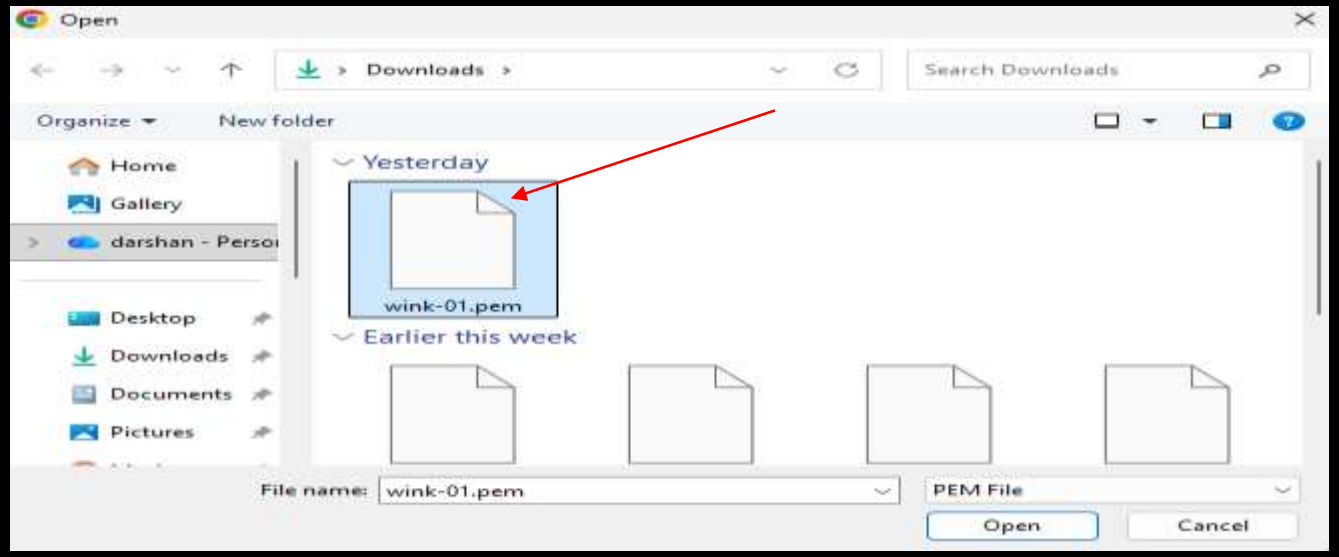

14. Click on **Get password** 🔓

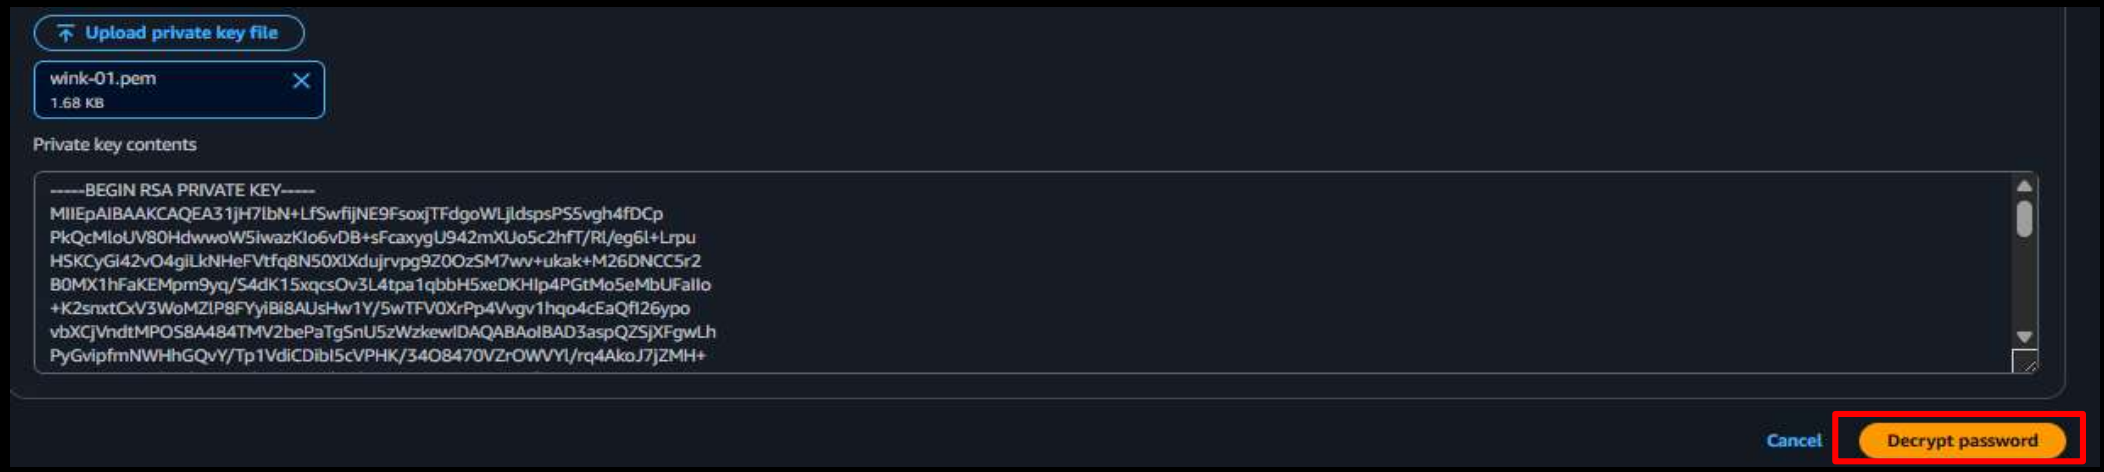

15. Upload the **Private Key** 🔑

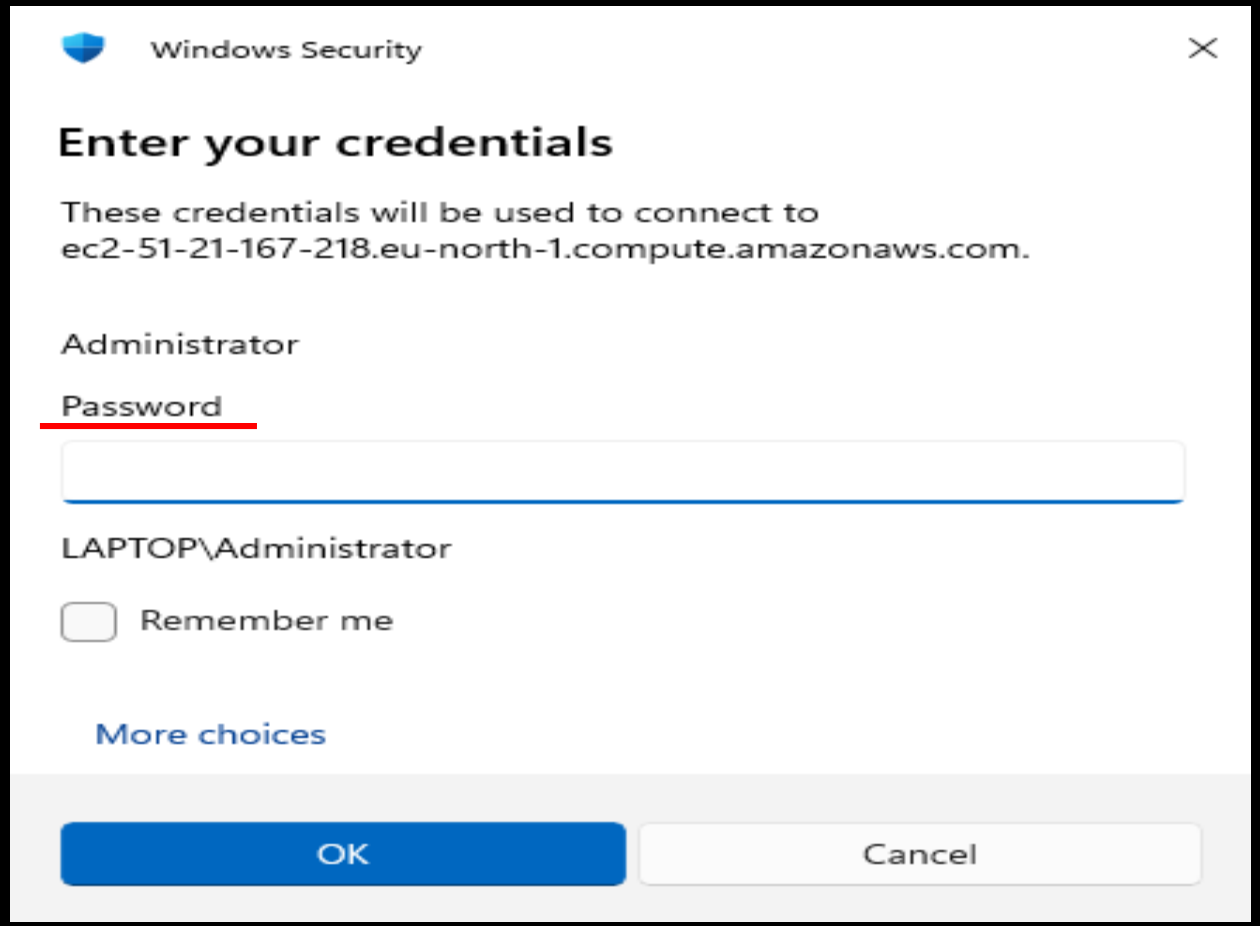

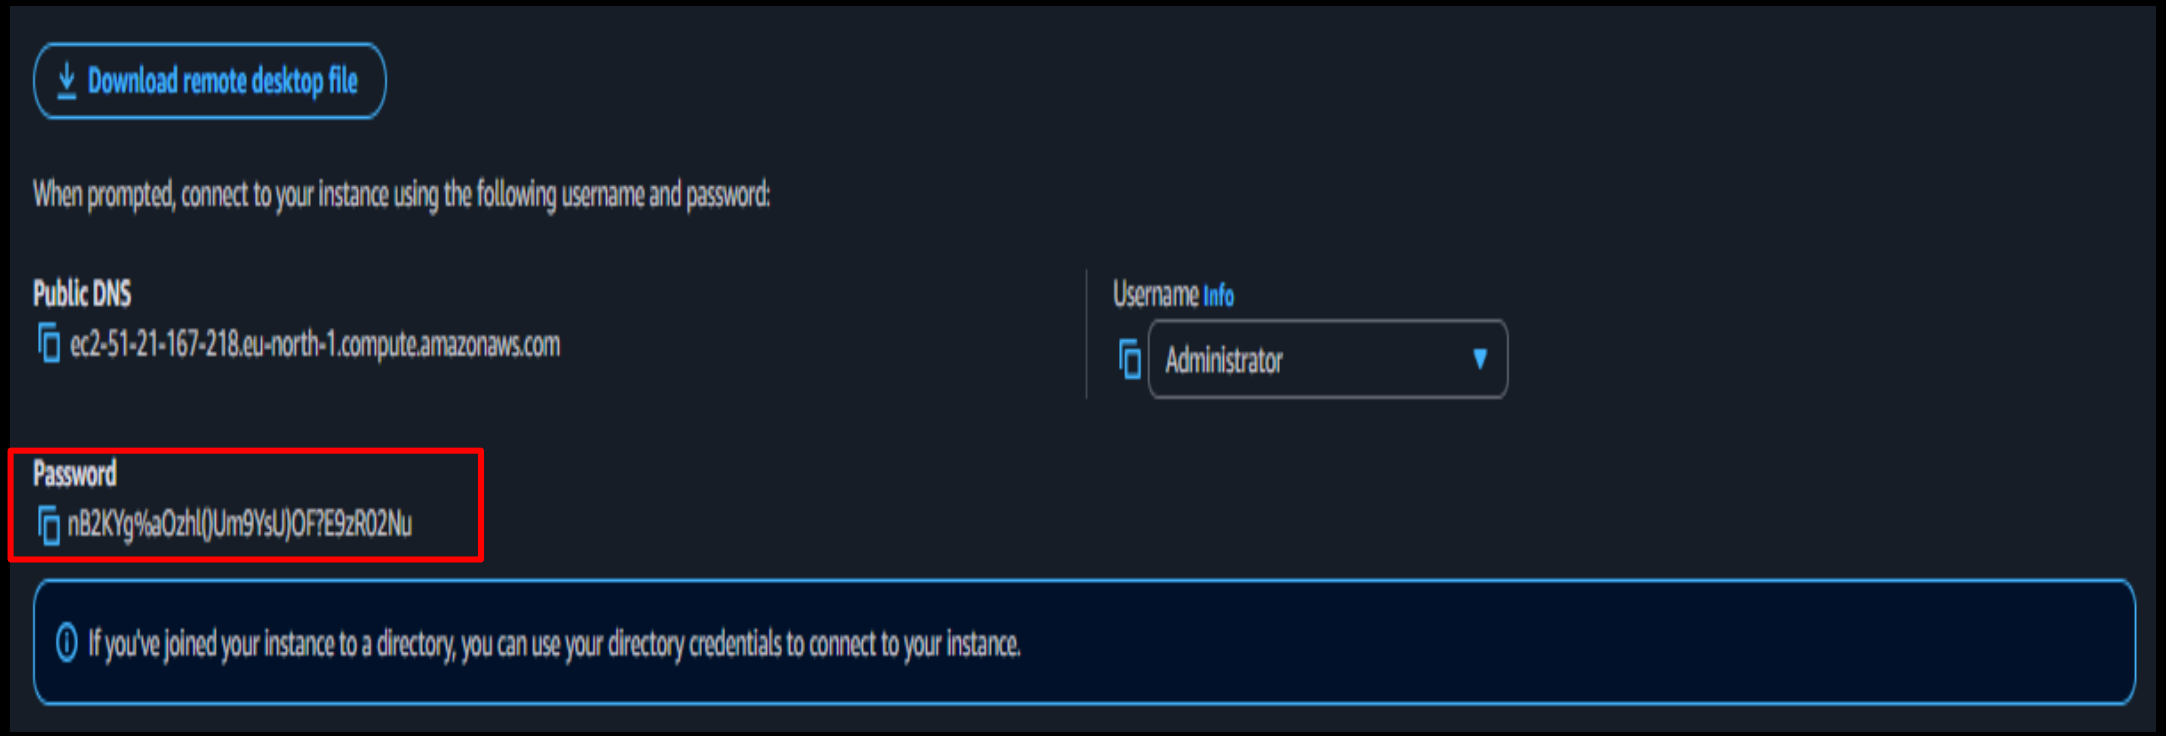

16. Click on the **Decrypt Password** 📜

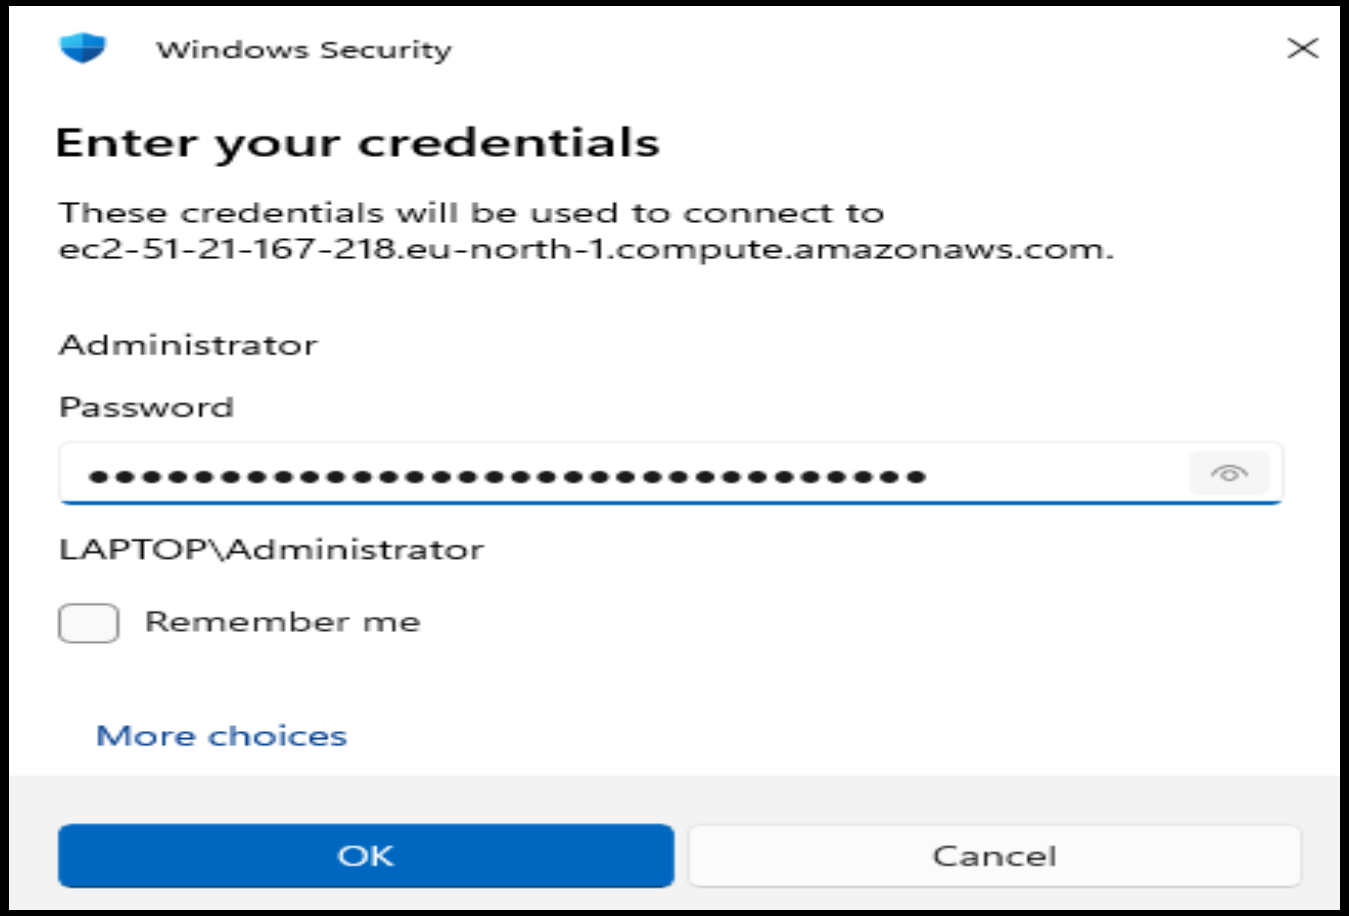

17. Go to the Downloads and click on Desktop Remote (eg..**Windo-01**)

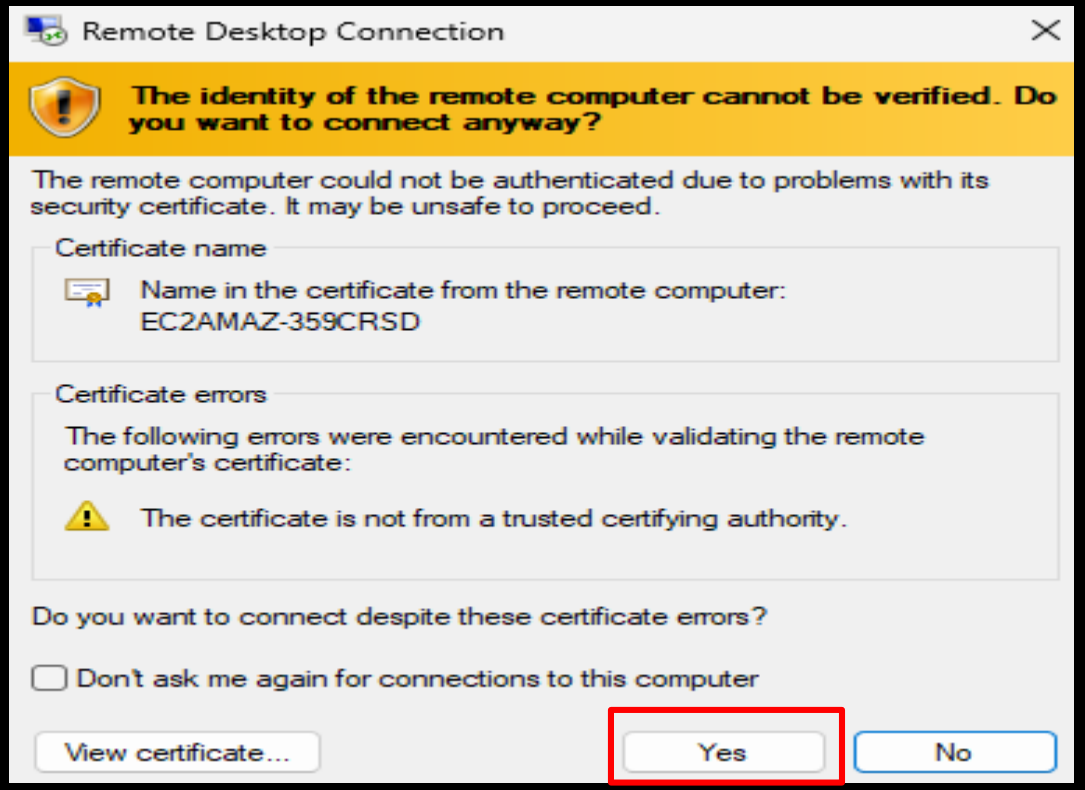

18. Copy the Password

18. Paste the Password 🔓

19. Click **Yes ,** for Cetificate Error

20. **Congratulation** , You Did it!! **Window OS** Successfully Run 🎉✨
